**Why I chose Arctext.js Plugin:**

**I chose Arctext because I think it looks more professional in webpages and give the webpages a nice clean look. Also, it gives a sense of life to the layout of the page and is more stylish from the norm. By norm, I mean the simple left, right or center alignment of the text displayed on the web. Using Arctext is useful by giving words, logos, or phrases characteristics and uniqueness that would appeal more to the viewer, instead of the same alignments of text that we see throughout a lot of webpages.**
